

Ibrahim Hasan Zubairi

Karachi, PK | +92 336 0424445 | brahim.zubairi@gmail.com | [Portfolio](#) | github.com/ibrahimhzhz | [LinkedIn](#)

AI engineer who ships. I build voice agents, automations and API integrations end to end, and I use AI coding tools (Claude Code, Cursor, MCP servers) daily to go from idea to a deployed, tested service quickly. Two AI internships, a co-founded AI automation company, and systems running in production for international and local clients.

EXPERIENCE

AI Intern, CDIS · Systems Limited

Jul 2026 to Present

- Built and deployed an **AI Voice Interviewer** for an enterprise assessment platform: browser mic audio streamed over WebSockets into the **Gemini Live API** for real-time speech-to-speech, with function-call-driven question flow, live transcription and automated scoring.
- Wired it into a fully automated hiring pipeline (JD generation, intake, resume screening, interview, offer) with human-in-the-loop review at each decision point. Debugged Live API session stability (quota errors, stalled sockets, session resumption).
- Building a **Microsoft Teams voice agent** (WASAPI loopback, Gemini Live + TTS, virtual audio routing) that joins calls and speaks in standups; now adding speaker identification and action item extraction.
- Set up a Jenkins CI/CD pipeline to a production VM; benchmarked fine-tuned small models against frontier LLMs on cost, latency and accuracy.

Co-Founder & Lead Engineer · LoqAI (loqai.tech), AI automation

Jan 2025 to Present

- Shipped a production **WhatsApp commerce bot** for a South African e-commerce brand (FastAPI, Meta WhatsApp Cloud API, WooCommerce, Railway): encrypted WhatsApp Flows storefront (RSA/AES-GCM), stateful checkout, and a Google Sheets layer so non-technical staff edit copy without redeloys.
- Built **LoqATS**, a multi-tenant AI applicant tracking SaaS (FastAPI, Celery, PostgreSQL, Redis, GCP). LLM limited to strict JSON extraction feeding a deterministic, explainable scorer, plus embedding-based skill matching; a 55+ case adversarial test pass surfaced six production risks before launch.
- Automated our own growth: cold outreach run by **Claude Code as orchestrator** with Apollo lead sourcing, warmed mailboxes and SPF/DKIM/DMARC, targeting real estate in the UAE, US and Australia.
- Through Vlabs, our digital services arm, run SEO, Google Business Profile optimization and site rebuilds for local businesses (restaurant, auto detailing, fitness studio).

AI Engineering Intern (Agentic AI) · Salesflo

Jul 2025 to Aug 2025

- Migrated a WhatsApp AI distributor agent for retail stores from Make.com to **Google ADK + Vertex AI**, cutting latency ~35%.
- Built multi-agent orchestration over the **A2A protocol** with SKU recommender, promotions and ordering tools; +20% decision accuracy, 40% less manual intervention.

PROJECTS

Pearls AQI Predictor · Python, LightGBM, Hopsworks, GitHub Actions, FastAPI, Streamlit

[github](#)

- Serverless ML system forecasting Karachi's AQI 24/48/72h ahead: hourly ingestion with self-healing backfill, daily automated retraining, feature store and model registry, SHAP explanations and hazard alerts. Six models compared with walk-forward CV; every deployed model beats the persistence baseline (RMSE down 14 to 17%). 169 tests.

LoqATS · FastAPI, Celery, Vertex AI Gemini + embeddings, PostgreSQL

[github](#)

- Open source backend of the ATS above: async resume processing, JWT multi-tenancy, public careers portal with rate limiting and anti-bot checks, immutable pipeline history.

EDUCATION

BS Computer Science · Karachi School of Business and Leadership

Expected Jul 2027

Machine Learning, Artificial Intelligence, DSA, Operating Systems, Computer Architecture, Linear Algebra

SKILLS

AI & Voice: Gemini API & Live API, Vertex AI, Google ADK, LangChain, Pipecat, ElevenLabs, Cartesia, Deepgram, function calling, multi-agent (A2A), fine-tuning, embeddings

AI-assisted building: Claude Code, Cursor, MCP servers, agentic workflows

Automation & APIs: Meta WhatsApp Cloud API & Flows, WooCommerce, Google Sheets API, Apollo, n8n, Make.com, webhooks

Backend & Cloud: Python, FastAPI, Celery, Redis, PostgreSQL, WebSockets, Docker, GCP (Cloud Run, Cloud SQL), Railway, Render, Jenkins, GitHub Actions

Security basics: JWT auth, rate limiting, secret rotation and git history scrubbing, SPF/DKIM/DMARC
